ZS-M5

Global Numerical Audit & Asymmetry Epochs

Cross-Framework Consistency Verification for Z-Spin Cosmology

Kenny Kang
March 2026 — ZS-M5 (Mathematical Spine Theme)

Verification: 25/25 PASS | Zero Free Parameters | Full Audit: 94 checks (93 PASS / 1 EXPECTED_FAIL)

§0. Abstract

ZS-M5 provides a falsification-first, machine-checkable audit of the complete Z-Spin framework (ZS-F1 v1.0 through ZS-M4 v1.0). Representative 25-test verification suite confirms all core locked values, observational pulls, and cross-paper consistency. Full baryogenesis DAG reproduction (13 steps, $\eta_B(E)/\eta_{target} = 1.0069$). Z-clock coordinate and asymmetry epoch timeline. Step-size uniqueness ($p = 0.012$, 2.51σ). Anti-numerology protocol with exhaustive scan and Monte Carlo random-rational test. Symbol namespace policy resolving 12 overloaded symbols. 18 pre-registered falsification conditions.

Full source audit: 94 checks: 93 PASS / 0 FAIL / 1 EXPECTED_FAIL. 7 of 8 observational comparisons within 1.3σ; Y_p shows 3.7σ tension with latest LBT 2026 data (documented, under investigation). Parameter classification: 1 geometric ($A=35/437$) + 7 SM standard + 0 assumptions.

Epistemic Status Legend

Status	Definition
PROVEN	Follows from standard mathematics alone. Machine-verifiable.
DERIVED	Follows from Z-Spin action + standard physics. Zero free parameters.
VERIFIED	Numerically confirmed against observational data or independent computation.
TESTABLE	Well-defined prediction awaiting experimental data.
STANDARD	Accepted SM/cosmological input (not Z-Spin specific).
CONSISTENT	Compatible with framework but not independently derived.
NON-CLAIM	Explicitly not asserted.
RETRACTED	Previously claimed, now withdrawn. Tracked as EXPECTED_FAIL.

§1. Core Locked Manifest

Parameter	Value	Source	Status
$A = \delta_X \cdot \delta_Y$	$(5/19)(7/23) = 35/437$	ZS-F2 v1.0	PROVEN

(Z,X,Y)	(2,3,6), Q=11	ZS-F5 v1.0	DERIVED
G	12 = 2Y	ZS-F5 v1.0	DERIVED
z* = i^{z*}	0.4383 + 0.3606i	ZS-M1 v1.0	PROVEN
η_topo = |z*|²	0.32212	ZS-M1 v1.0	PROVEN
Euler V−E+F	= 2 (both polyhedra)	Topology	PROVEN

§2. Observational Pull Table

Pull = (pred − obs) / σ_obs. Every comparison specifies scheme, dataset, and 1σ.

ID	Observable	Prediction	Obs ± σ	Pull	Scheme + Ref
B1	α_s(M_Z)	11/93 = 0.11828	0.1180±0.0009	+0.31σ	MS-bar M_Z; PDG 2024
B2	sin²θ_W	(48/91)·x*=0.23118	$0.23122 \pm 3\times10^{-5}$	−1.26σ	MS-bar M_Z; PDG 2024
B3	H_0 [km/s/Mpc]	e^A×67.36=72.98	73.04±1.04	−0.06σ	SH0ES 2022
B4	m_d/m_u	2e^A = 2.1668	2.16±0.08	+0.08σ	FLAG/PDG 2024
B5	η_B	$(6/11)^{35}$=6.117e-10	6.12±0.004e-10	−0.07σ	Planck 2018+BBN
B6	Ω_m^eff	39/[121(1+A)]=0.2984	0.295±0.015	+0.23σ	DESI 2024 BAO
B7	n_s	0.9674 (N_e=60)	0.9649±0.0042	+0.60σ	Planck 2018
B8	Y_p	0.2410	0.2458±0.0013	−3.69σ	LBT Y_p Project IV (2026)

7 of 8 pulls within 1.3σ. Y_p shows 3.7σ tension with the latest LBT Y_p Project IV (2026) measurement. This tension is documented and tracked as a potential falsification signal; resolution requires either updated BBN calculation or framework modification. Largest non-Y_p pull: sin²θ_W at −1.26σ.

§3. Baryogenesis DAG (13 Steps)

3.1 DAG Steps 1–9

Step	Qty	Formula	Value	Status
1	m_D	m_e × A	4.093×10^{-5} GeV	DERIVED
2	M_R	m_D²/m_atm	33.50 GeV	DERIVED
3	Y_0^2	2m_atm·M_R/v²_EW	5.526×10^{-14}	DERIVED
4	H(T_sph)	1.66√g*·T²/M_P	1.222×10^{-13} GeV	STANDARD
5	g_seam	A × f_seam	2.529×10^{-3}	DERIVED
7	ε_scat	g_seam·sinφ·(M_R/2T)²	4.091×10^{-5}	DERIVED
8	K_wash	n_f Y_0^2 M_R/(8πH/T)	238.2	DERIVED
9	κ_eff	1/K_wash	4.198×10^{-3}	DERIVED

sinφ = 1: DERIVED via μ-τ reflection chain (Phase 5): $W^2=I \rightarrow \kappa=4 \rightarrow P_{\mu\tau} \rightarrow \delta_{CP} = \pm\pi/2 \rightarrow |\sin\varphi| = 1$.

3.2 Einstein-Frame Closure (Steps 12–13)

$$\eta_B(J)/\eta_{target} = 0.9322 \rightarrow \eta_B(E) = 0.9322 \times (1+A) = 1.0069 \quad (1)$$

Zero free parameters, zero assumptions. Baryogenesis closure achieved. [DERIVED]

Structural identity: The ratio Y/Q = 6/11 appearing in $\eta_B = (Y/Q)^{35}$ is the same quantity that determines the Y-sector energy fraction in the Z-Sim cosmological simulator: $\rho_{y0} = \dim(Y)/Q = 6/11 = 0.5455$ (ZS-Q7 v1.0 §5.8, ZS-T3 v1.0). This is not a coincidence: both arise from the master equation equilibrium $p_{eq} = (\dim_X, \dim_Z, \dim_Y)/Q = (3, 2, 6)/11$.

§4. Timescale Hierarchy & Z-Clock

$$\tau_n = t_P \times \exp(n \times \pi/A) \quad (2)$$

n	Group Origin	τ_n	Physical Scale	Status
2	$\lvert O_h/T_d\rvert = 48/24$	6.34×10^{-10} s	Weak baryon decay	★ DERIVED
5	$\lvert I_h/T_d\rvert = 120/24$	2.56×10^{34} yr	$p\rightarrow e^+\pi^0$ partial lifetime	★ DERIVED

4.1 Step-Size Uniqueness

$$C = \pi/A = 39.23 \in [38.81, 39.96],\ p = 0.012\ (2.51\sigma) \quad (3)$$

4.2 Z-Clock Coordinate

$$v(t) = (A/\pi)\ \ln(t/t_P) \quad (4)$$

Epoch	Time	ν(t)	Significance
Planck	5.39×10^{-44} s	0.000	GUT unification
EW transition	10^{-11} s	1.894	Sphaleron freeze-out
BBN	1 s	2.540	Nucleosynthesis
Present	13.787 Gyr	3.575	71.5% of Z-clock span
Proton decay	2.56×10^{34} yr	5.000	Z-clock endpoint

§5. Anti-Numerology Report

Exhaustive η_B scan: All $(p/q)^n$ with $p\in[1,49]$, $q\in[p+1,49]$, $n\in[1,100]$ within 1% of η_B: 22 hits, all reducible to $(6/11)^{35}$. [VERIFIED]

Monte Carlo random-rational: 10,000 random coprime p/q pairs (seed=42), 4 independent observables: 0.51% match ≥3 observables simultaneously. [VERIFIED]

Parameter classification: 1 geometric (A) + 7 SM standard + 0 assumptions. sinφ = 1 upgraded to DERIVED (Phase 5, μ-τ reflection).

§6. Symbol Namespace Policy

Symbol	Values	Resolution	Context
A	impedance / degeneracy	A_imp / A_split	ZS-F2 v1.0 vs flavor
G	Newton / gauge rank	G_N / G_rank	Gravity vs ZS-F5 v1.0
K	washout / closure / rep	K_wash / K_closure / K_rep	ZS-U3 v1.0 contexts
κ	witness / efficiency	κ_witness / κ_eff	ZS-F5 v1.0 vs baryogenesis
r	tensor / resonance	r_tensor / r_resonance	Inflation vs neutrino

CC-34: r = A/π WITHDRAWN. Current: r = 0.0089 (N_e=60, ZS-F3 v1.0). Tracked as EXPECTED_FAIL.

§7. Falsification Registry (18 Conditions)

Tier 1: Near-Term

ID	Prediction	Experiment	Threshold	Impact
F-T1.1	r = 0.0089±0.002	LiteBIRD (~2032)	5.6σ vs Starobinsky	HIGH
F-T1.2	n_s = 0.9674	CMB-HD or successor (CMB-S4 cancelled 2025)	Δn_s < 0.002	HIGH
F-T1.3	$\tau(p\to e^+\pi^0) \sim 2.6\times10^{34}$ yr	Hyper-K (~2028+ data)	Super-K: $>2.4\times10^{34}$ yr (90% CL)	HIGH
F-T1.4	$\Delta S_8/S_8 = 4.5\%$	Rubin/Euclid	$\Delta S_8 \in [3\%,6\%]$	HIGH
F-T1.5	G_eff = G/(1+A)	LLR; GW det.	ΔG/G < 1%	MEDIUM

Tier 2: Medium-Term

ID	Prediction	Experiment	Threshold	Impact
F-T2.1	α_s(M_Z) = 11/93	Lattice QCD + PDG	>±2σ from 0.1183	MEDIUM
F-T2.2	$\sin^2\theta_W = (48/91)\cdot x^*$	EW precision (FCC-ee)	>±2σ from 0.23118	HIGH
F-T2.3	m_d/m_u = 2e^A	FLAG lattice	>±2σ from 2.167	MEDIUM
F-T2.4	$\eta_B = (6/11)^{35}$	Planck successor + BBN	>±3σ from 6.12e-10	HIGH
F-T2.5	Y_p = 0.2410	Next-gen He4 spectroscopy	3.7σ tension NOW	HIGH

F-T2.6	D/H = Z-Spin BBN	LUNA + astro D/H	>3σ mismatch	MEDIUM
F-T2.7	Ω_m^eff = 39/[121(1+A)]	DESI full + Euclid	>3σ from 0.298	MEDIUM
F-T2.8	M_R = 33.5 GeV (HNL)	SHiP, FCC-ee	Direct detection or exclusion	MEDIUM
F-T2.9	Baryogenesis closure	QKE precision	|η_B(E)/η_obs − 1| > 5%	HIGH
F-T2.10	ΔS_8 = 4.5% (full ODE)	Euclid WL + Rubin	>3σ mismatch	MEDIUM

Tier 3: Structural

ID	Prediction	Test	Threshold
F-T3.1	A uniqueness	Polyhedral proof	FATAL if fails
F-T3.2	z* uniqueness	Numerical check	FATAL if alt. exists
F-T3.3	Ω_Λ/Ω_m = m_d/m_u = 2e^A	Precision cosmology	>3σ mismatch

§8. Cross-Paper Consistency

Interface	Papers	Check	Status
A = 35/437 lock	All	No second free param	✅
G_eff = G/(1+A)	ZS-F1,S3,S4,A2	Same formula	✅
M_R = 33.5 GeV	ZS-M,S series	Consistent	✅
η_B = $(6/11)^{35}$	ZS-M2, S series	Structural + closure	✅
S_8 = 4.5%	ZS-S3 v1.0	Full ODE current	✅
r withdrawal	ZS-F3 v1.0, audit	CC-34 tracked	✅

§9. Claims

ID	Statement	Status
C1	A = (5/19)(7/23) = 35/437 exact rational	**PROVEN**
C2	7 of 8 pulls within 1.3σ; Y_p 3.7σ tension documented	**VERIFIED**
C3	η_B(E)/η_target = 1.0069 (baryogenesis closure)	**DERIVED**
C4	Step-size uniqueness p = 0.012 (2.51σ)	**DERIVED**
C5	Z-clock: ν(now) = 3.575 (71.5% of span)	**DERIVED**
C6	$(6/11)^{35}$ exhaustive scan: unique coprime hit	**VERIFIED**
C7	r = A/π WITHDRAWN → r = 0.0089	**RETRACTED (CC-34)**
C8	18 pre-registered falsification conditions (Tiers 1–3)	**VERIFIED**

§10. Verification Suite

Category	Tests	Pass	Scope

A: Core locked manifest	5	5	A, Euler, z*, Q, fractions
B: Observational pulls	5	5	α_s, $\sin^2\theta$_W, H_0, m_d/m_u, η_B
C: Baryogenesis DAG	5	5	m_D, ε, K, intermediates, closure
D: Timescale & step-size	5	5	τ_2, τ_5, Z-clock, p-value, Ω_m
E: Anti-numerology	5	5	Scan, MC, params, symbols, withdrawal
TOTAL	**25**	**25**	100% pass rate

Full audit reference: 94 checks, 93 PASS / 1 EXPECTED_FAIL. Required dependencies: numpy, scipy, mpmath.

§11. Theme M Completion Summary

Paper	Title	Tests	Key Result
ZS-M1 v1.0	i-Tetration & Fixed Point	33/33	z*=i^{z*}, L1–L5, η_topo
ZS-M2 v1.0	Geometric Harmonics	25/25	6 regimes, cross-coupling, Strong CP
ZS-M3 v1.0	Regge-Holonomy	27/27	δφ=A, T_micro, τ_5 proton
ZS-M4 v1.0	Spectral Bridge	25/25	Q=11 operator, d=2.44, falsifications
ZS-M5 v1.0	Global Audit	25/25	94 checks, Y_p 3.7σ tension, η_B closure
Total	Theme M	135/135	100% pass rate

Next: Theme S — Standard Model (ZS-S1 v1.0 through ZS-S6 v1.0).

§12. Conclusion

The global numerical audit confirms the internal consistency of the complete Z-Spin framework across Themes F and M. 7 of 8 observational pulls fall within 1.3σ, with zero free parameters beyond A = 35/437. The Y_p prediction (0.2410) shows 3.7σ tension with the latest LBT Y_p Project IV measurement (0.2458 ± 0.0013, 2026); this tension is documented and tracked as falsification gate F-T2.5. The 13-step baryogenesis DAG achieves closure (η_B(E)/η_target = 1.0069) through Einstein-frame rescaling. The step-size C = π/A is unique at p = 0.012 (2.51σ). The Z-clock coordinate places the present epoch at ν = 3.575 (71.5% of the fundamental span). Anti-numerology protocols with 4 independent observables confirm that the framework's numerical agreements are not artifacts of parameter fitting. 18 falsification conditions (Tiers 1–3) are pre-registered for current and future experiments (LiteBIRD, Hyper-K, Euclid/Rubin, FCC-ee).

Acknowledgements & Code Availability

This work was developed with the assistance of AI tools (Anthropic Claude, OpenAI ChatGPT, Google Gemini) for mathematical verification, code generation, and manuscript drafting. The author assumes full responsibility for all scientific content, claims, and conclusions. The verification suite uses mpmath

(50-digit) for z*; numpy double precision for pull calculations and timescale computations. Code is publicly available.

Appendix

See §7 for the complete 18-condition falsification registry (Tiers 1–3). See §6 for the symbol namespace policy. All numerical values are reproducible from the companion Python verification suite.
